

Fertilization

1. True or false?

	True	False
A) Insects help some plants to reproduce.		
B) Fertilisation occurs when pollen is transferred from one flower to another.		
C) The ovary gets bigger and bigger to become a fruit.		

2. Answer.

What do the ovules become after they have been fertilised?

---

3. Cut and stick - Fertilisation of a flower.

- Label the male pollen, female eggs, stigma, style and ovary.
- Draw the pollen tubes at stage 1, 2 and 3.
- Write a sentence under each to show how the male and female special cells join together.
- Which stage shows fertilisation?
- Give another name for the fertilised egg.
- What happens to the ovary after fertilisation?

The pollen grows a pollen tube

The tube grows down the style

The tube enters the ovary

The pollen joins the egg
