Please note: To write here, you must register first. WikiPad is a wiki-like notebook for storing your thoughts, ideas, todo lists, contacts, or anything else you can think of to write down. What makes WikiPad different from other notepad applications is the ease with which you can cross-link your information. Links in a wiki are created by typing in WikiWords. A WikiWord is mixed case word, usually or always is example WikiWords. Real-time wiki WikiPad is not a web server, or application server, or groupware solution, WikiPad is a standalone notepad like application. A development environment for your thoughts Software developers have grown accustomed to certain features from their editing environment that make their jobs easier. Features like auto-completion, outline views, incremental search, easy source code navigation, IDE's that provide these features can greatly increase developer productivity. WikiPad attempts to utilize some of these features to address the problem of personal information management. Personal Information Management How do you manage all of the random bits of information in your personal and professional life? Where do you track your wife's favorite food, your boss's kids names, your personal todo list, the name of the movie you just read or review of, the name of the book a friend recommended, WikiPad was created to address this issue of personal information management. It provides a place to manage the massive amounts of information you have stuffed in your head, on stickers, or on your computer. Quick Start Don't let WikiPad's many features confuse you! First stick with the following basics. They are simple. The main tree in WikiPad does not work like an outline; if it confuses you, turn it off for now, you will understand it later. For now see WikiPad as a collection of text files. If you want to write something down about some topic, press Ctrl+O (O like "open"), type the name of the topic and press enter. Now write down your notes. If you want to see your notes on a topic press Ctrl+D and type what you are looking for. You can exit from one topic to another by putting the name of a topic in square brackets, like [My software].

Current version: 4.3
New Features

Freeware!

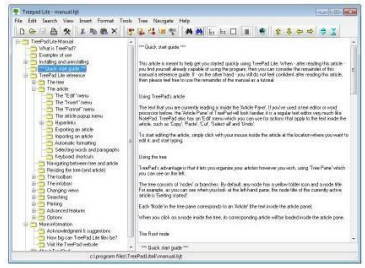

TreePad Lite is an award-winning Personal Information Manager for Windows (and Linux/Wine). TreePad Lite is fun & easy to use, small in size, yet very powerful. It is also fully portable.

TreePad Lite can be used to store, edit, search, organize and browse any type of textual data, such as: notes, articles, scrap, links, phone numbers, addresses, scraps pasted from the Web, etc.

The main TreePad Lite window (see the screenshot on the right) consists of two panes:

- the article pane (or right-hand pane) which consists of a plain-text editor. Here you can enter your scraps, notes, articles, phone numbers, addresses, etc.
the tree pane (left-hand pane) enables you to browse your data. It consists of 'tree nodes'. Each node is associated with one article. If you select a different node (inside the left-hand pane), then a different article is loaded (inside the right-hand pane).

In addition to the tree pane, you can also use the powerful internal search engine to locate your data (screenshot).

HISTÒRIES PETITES PER A UN GRAN CANVI

ENERGY BITS és un projecte mediàtic transversal que fa campanya per a l'ús sostenible de l'energia. En el projecte s'hi han implicat setze socis que provenen d'onze països europeus i d'altres parts del món. ENERGY BITS produirà 27 documentals curts per a la televisió, un videojoc educatiu i un documental participatiu.

Tot això es publicarà en aquest lloc web la tardor del 2012. A més a més, el projecte recollirà contribucions de vídeo personals de tot Europa sobre temes d'energia.
