

INTRODUCTION

The project Thousands To Measure is divided into 15 units of one hour each. The first seven units include length and the rest study area and perimeter. For each of the units there is a unit plan, the teacher's notes, the student's worksheets and the support teaching resources. There is also a power point inside the supplementary resources.

This project is oriented to 11 and 12 years old students although it can also be adapted for younger students, depending on their level, needs and experiences with the subject.

I am deeply grateful to a wide range of people who have contributed to the production of this project. I want to thank my CLIL teachers in Nile, Kay and Carole, my suitemates and friends Esther, Angels, Judith and Núria, my school Ceip Antoni Brusi and the Department of Education of Catalonia.
