

Trio dictation:

A.

The respiratory system obtains oxygen and expels carbon dioxide. When we inhale, air goes into the lungs. When we exhale, air leaves the lungs.

B.

The circulatory system is made up of blood that contains plasma, red cells, white cells and platelets. Blood circulates through the heart and the blood vessels.

C.

The excretory system eliminates waste substances from the blood. It is made up of the kidneys, the ureters, the urethra and the bladder.
